I would like to request a rush search for case 09/049865

The following properties of CTLA4 or CTLA4Ig:

- 1) responsible for an increase in the production of gamma-interferon.
- 2) binding to complement.
- 3) inhibiting production of immunoglobulins
- 4) inhibiting activated macrophages from reacting with target cells.

Thank you.

Minh-Tam Davis
